INTRODUCTION

In an increasingly competitive landscape, BrightTV's objective is to pivot from simply maintaining subscribers to actively accelerating growth through a value-based approach. The Customer Value Management (CVM) team is central to this effort, shifting from reactive churn management to proactive customer-event triggers and intelligent scaling.

This initiative will focus on leveraging unified customer data to create tailored, personalized experiences that enhance customer lifetime value (CLV). By analyzing customer behavior and engaging through automated, multi-channel triggers—such as content viewing patterns and service usage—we can effectively drive acquisition, cross-selling, and upselling.

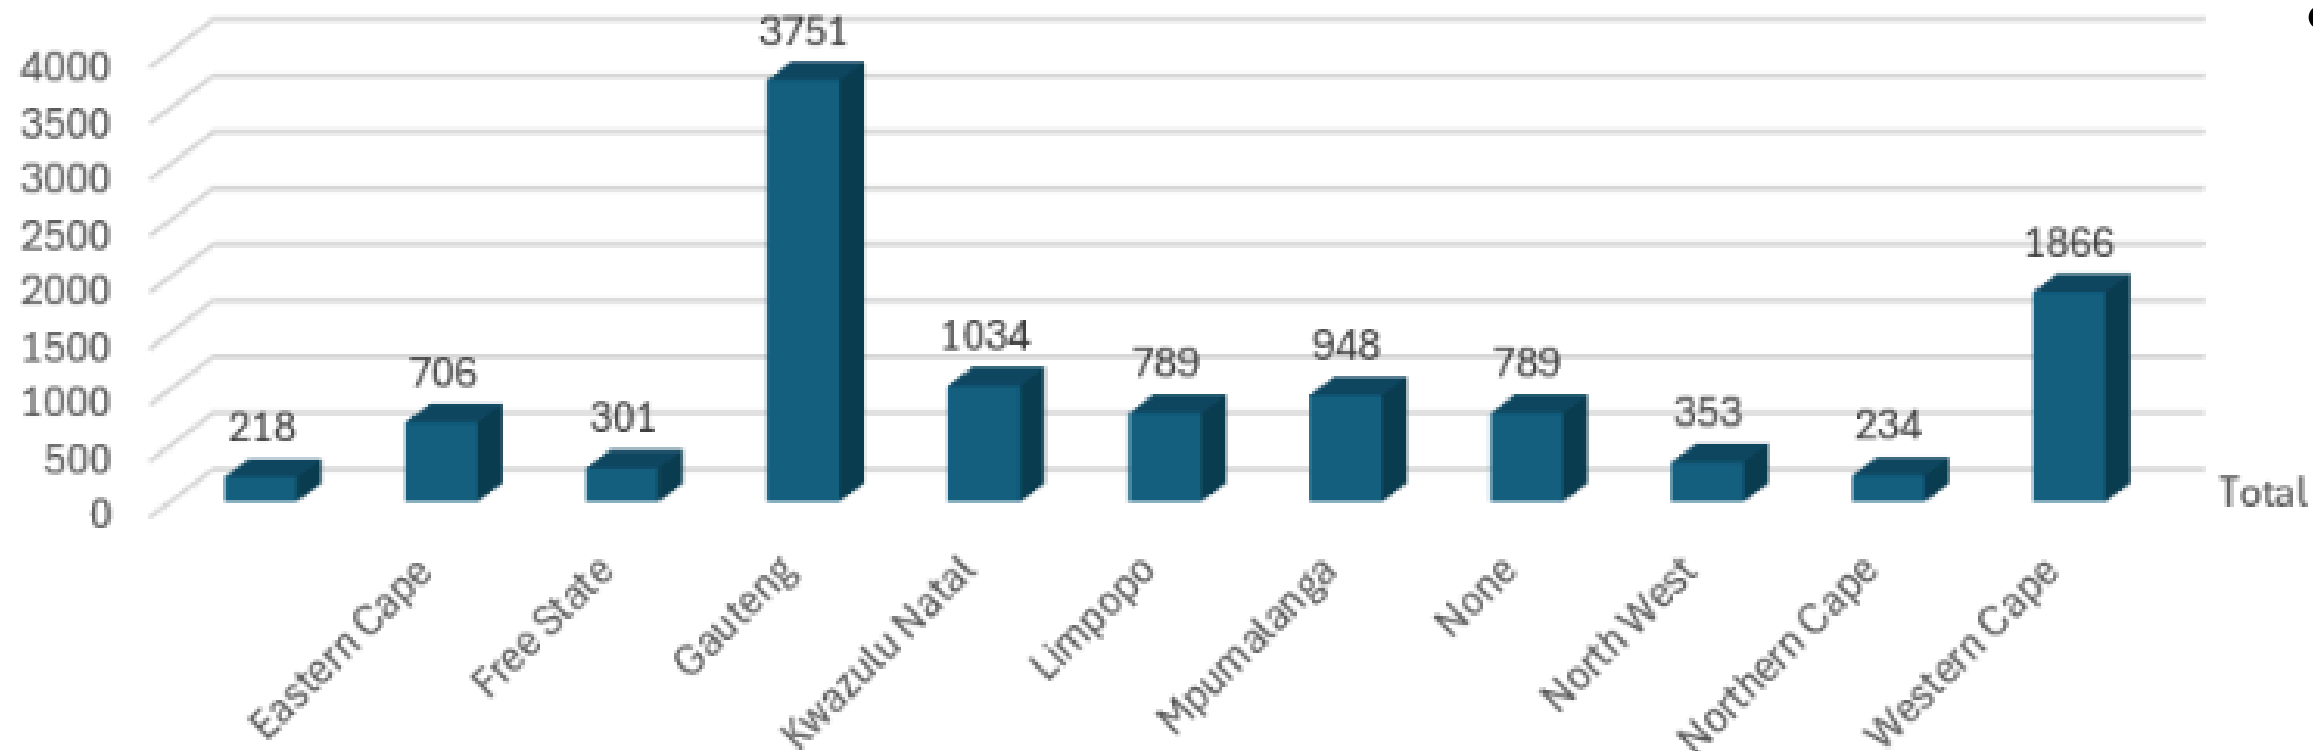

Business Analysis

**Null data untampered with*

Province Breakdown
